COMMENTS				
The project runs successfully from the very first glance, yet almost all the routes do not run and return 404 ... I can see you guys don't quite follow a good route naming convention .. I have to write /api/Event/Event instead of /api/Event ..... This means you have a problem with the following the best practices this is so misleading and shows that you didn't fully understand how the index.js reference the routes in the other routes files .... You guys have Authorized and Unotharized user model ? Why is that ? Being authorized doesn't have anything to do with being a different Model .. they are all a User model .... The timeline Model does have only 1 event ? Each timeline class has only 1 event ? really ? .... Moving on to the completeness ... almost all the routes are missing the delete and put methods ... So you didn't fully implement CRUDs ... you have only implemented CRs ... no Update or Delete methods found .... You have to complete the implementation of those as well ... I respect your efforts guys and I just want you to fix those little mistakes, well done everyone, cheers !
